Dmailer online

Going Beyond Conventional Backup & Synchronization!

● What is Dmailer Online?

Dmailer Online is a new subscription-based online storage service that allows you to safeguard your data by backing it up online on a remote server. Designed with flexibility in mind, **Dmailer Online** provides:

- Additional data back-up and storage on a remote server
- Greater security in case of mishaps on the original storing device
- Instant 24/7 access to data via the Web
- An easy way to share data and send large files in just a few clicks
- Efficient use of bandwidth through smart backup algorithms
- A very practical way for sharing complete folders, great for sharing family pictures or working on office projects
- Easy download of a folder as a single .zip file via the web interface

Dmailer Online easily and effectively allows any computer user (*PC or Mac*) to store data online, via multiple devices and from different locations. **Dmailer Online** has been designed to backup, synchronize your data and store it remotely with minimal hassle, ensuring that it can be easily accessed, shared and restored at any time.

Dmailer Backup fully integrates a local and online backup solution that meets today's backup needs

● Is Dmailer Online available on its own or as a package with Sync and Backup?

You can only use Dmailer Online with Dmailer Backup or Sync. Because some types of data are best stored on a drive and others are best stored online, this combination enables you to manage both local and online backup services. Leveraging Dmailer Online with Dmailer Backup or Sync provides a hybrid, best-in-class solution to protect and synch all of your data – without having to install anything on your computer.

What does it offer current Dmailer Sync users?

Dmailer Online can be easily setup and activated via Dmailer Sync in just few clicks. By leveraging both Dmailer Sync and **Dmailer Online**, you'll have access to the same set of features that you've come to trust, plus the added capability of storing your data online during the synchronization phase – giving you access to it 24 hours a day, 7 days a week. This winning combination provides you with peace of mind, knowing that all of your synchronized data from your PC can now be stored and shared online. If any mishap takes place with your mobile storage device, have no fear - the same data will be available online. Or if you inadvertently delete a file from your device, you can bring it back to life from your online copy in a single click.

What does it offer current Dmailer Backup users?

Current Dmailer Backup users, *both PC and Mac*, can now go beyond conventional backup with **Dmailer Online**. Store secure copies of your files online for easy access from any computer, and easily manage large files that may take up too much space on traditional storage devices. **Dmailer Online** is designed to provide additional data backup with minimal hassle, while also ensuring that selected data is continuously and automatically backed up without end-user intervention. Additionally, **Dmailer Online's** powerful search engine capabilities and revision system allow you to go back and easily access earlier versions of documents and data.

How can Dmailer partners leverage Dmailer Online?

Dmailer Online provides storage device manufacturers with an attractive way of adding value to their hardware solutions. Hard disk drive, flash card and SSD storage manufacturers and resellers can easily offer the **Dmailer Online** storage service to generate additional after-market revenue. Additionally, third party services such as online photo finishing can be linked and integrated within the solution to enhance the device's overall value proposition.

Dmailer can also provide any partner with a branded version of the tool, including customized websites, backup plans and more. Dmailer's impressive list of Original Equipment Manufacturers (OEMs) attest to our many years of experience and the trust we have earned in providing industry-leading software and service solutions.
