

FOR IMMEDIATE RELEASE

Dmailer Joins SanDisk Enterprise Solutions Technology Alliance

Enterprise customers benefit from enhanced corporate data protection

MARSEILLE, FRANCE, September 24, 2007 – Dmailer, the leading provider of portable backup and synchronization software solutions for a range of mobile devices, today announced that it has joined the SanDisk® Enterprise Solutions Technology Alliance (SESTA). SESTA gives members the opportunity to test the compatibility of their products with secure portable solutions from SanDisk, a leader in personal storage devices. Dmailer has evaluated its Dmailer V7 software under the SESTA partner testing guidelines.

“We are very enthusiastic about Dmailer joining SESTA, and look forward to the benefits that Dmailer’s collaboration with Sandisk will provide,” said Ella Taran Katz, senior manager for business development in the Enterprise Division at SanDisk. “Enterprise IT managers will have a new level of comfort in knowing that Dmailer and SanDisk products work together, without worrying about conflicts or incompatibilities.”

Easy to use and always secure, Dmailer V7, available with many USB portable flash drives, allows the synchronization and back up of all personal files (productivity documents, photos, audio and video files, etc.), computer settings (Internet Explorer and Firefox favorites, desktop wallpaper) as well as all data contained in Outlook®, Outlook Express or Outlook Web Access applications (email, attached documents, files, contacts, notes, tasks, calendar) from a personal computer to a mobile storage device. Users can then access and edit them from any windows PC wherever they go, even if Outlook or Outlook Express is not pre-installed on it. When finished, Dmailer V7 synchronizes all changes back to a user’s home or work computer as if they had never been away. Importantly, Dmailer V7 leaves no ‘footprints’ behind, thereby safeguarding information regardless of whether the system used is a public computer or that of a colleague.

“One of today’s biggest IT security threats is the proliferation of uncontrolled, highly portable storage devices,” said Lucas Léonardi, Managing Director and CEO, Dmailer. “Dmailer V7, combined with SanDisk secure devices, goes a step further in safeguarding information by offering a powerful solution to ensure corporate data protection.”

SanDisk’s flagship secure device is the Cruzer® Enterprise high-speed USB flash drive with mandatory password protection and 256-bit AES hardware-based encryption. Data stored on Cruzer Enterprise has virtually ironclad protection against access by unauthorized users if the drive is lost or stolen. More information on Cruzer Enterprise and SESTA is available online (www.sandisk.com/sesta).

About Dmailer

Established in 2001 and located in Marseille, France, Dmailer (www.dmailer.com) is a privately held software company specializing in portable backup and synchronization solutions for a range of mobile devices, including USB flash drives, memory cards, external hard disk drives, mp3 players, embedded phone memory, SIM cards and flash based memory cards for mobile phones (miniSD, microSD, microSDHC, MMCmobile). The company’s flagship product, Dmailer V7, is currently available in nine languages and is sold in over 100 countries worldwide. It is bundled with SanDisk, Western Digital and LaCie portable storage products on a worldwide basis.
