

Dmailer takes your Outlook® mailbox for a ride

Send and receive personal emails from any PC thanks to the Dmailer two-way synchronization applications

CeBIT 2006 Hannover, March 9th, 2006 – Dmailer, a fast growing company based in Marseille, south of France, gives facts to the concept of mobility. Thanks to its two-way synchronization applications, Dmailer allows the transfer of Outlook® data and personal data to any peripheral storage device and provides easy data access to them from any PC, anywhere in the world, even if Outlook® is not pre-installed on it.

So far, roaming users could virtually not access their personal Outlook® mailbox from a third-party PC. Mobility would therefore fit with Internet access only when carrying a personal PC. By designing smart applications, Dmailer bridges that gap, making life easier and lightening the luggage of those who just won't travel without their messaging tools.

Accessing your Outlook® mailbox on any PC has never been easier: just plug an USB storage device - smart drive, flashcard, external hard drive, an iPod or even a portable PlayStation - to the source PC USB port and synchronize the required data with Dmailer.

Dmailer duplicates Outlook® on the host PC to create a replica of your personal workspace. Roaming users access their file folder tree, emails, contacts, calendar, attachments, memos and to-do lists. They can also send emails, edit their calendar with new events, update contact lists, exactly as if working on their own PC. Dmailer handles different user profiles and can synchronize with multiple PCs without the risk of mixing up data when a user deals with several email accounts.

In addition to messaging applications, Dmailer synchronizes personal files (Word®, Excel®, Access®, pdf, Mp3 and Mpeg) and Internet Explorer or Firefox bookmarks.

Back to your home or office PC, Dmailer synchronizes all updates made on the external drive upon booting. Changes are automatically applied to Outlook® and/or personal data files. Thanks to Dmailer innovative solutions, the source PC is updated as if it had always been with you.

Dmailer converts an external storage device into a secure and private working tool with password protection and AES 128-bit encryption. Data saved to the external storage device from the host PC is automatically encrypted.

How about surfing the web without leaving any records in the browser's cache and history? This is the very purpose of Dmailer synchronizing with I.E. and Firefox bookmarks and replacing the legacy bookmark, yet, only during the surfing session.

In case of theft, loss or damage to the source PC, Dmailer restores all saved data on to the new PC by simply clicking the "Restore" icon.

It is now possible to safely access and edit personal workspaces from a colleague's PC, in an Internet browsing center, at school or from home.

Dmailer, the ideal alternative to cumbersome laptops, grants immediate and user-friendly access to enterprise users and consumers on the move who need to keep in touch with their office, customers, friends or family.

Dmailer software solutions:

DmailerSync v5.5:

Supports Outlook® 2000, 2002, 2003,
Microsoft Windows ® 2000, XP Home and Professional,
Microsoft Exchange ® 5.5, 2000, 2003
